

Environmental Policy

We are in a pivotal time for confronting environmental issues and studying the policies and tools necessary to create the communities and world we want to live in. The Master of Arts (MA) in Environmental Policy prepares students to act on the challenges presented by climate change, loss of biodiversity, urbanization, and agriculture. The program's interdisciplinary coursework covers the legal and political structures that do (or might) oversee, regulate, manage, subsidize, or otherwise affect environmental sustainability, environmental injustices, and environmental health. It also teaches about the social practices, moral authority and economic dynamics that affect interventions. Students gain deep insights and pragmatic skills through independent research and community-based projects and internships.
