Engineering Mathematics

The Division of Engineering Mathematics was established within the Department of Mechanical Engineering and Mechanics to foster interdisciplinary research in the application of mathematics to the engineering and physical sciences. Interaction with industry is actively encouraged, and appropriate programs are designed for part-time students.

Division faculty are responsible for the graduate degree programs in computational and engineering mechanics as well as courses in engineering mathematics (see mechanical engineering and mechanics (http://catalog.lehigh.edu/coursesprogramsandcurricula/engineeringandappliedscience/mechanicalengineeringandmechanics)).
